

The CCOR Series of Compact Coronagraphs for Space Weather Forecasts

Natsuha Kuroda¹, Arnaud Thernisien²,
Damien Chua², Tim Carter², Nathan Rich²,
John Spitzak³, Larry Gardner⁴

4th Eddy Cross-Disciplinary Symposium,
10/31/2023

¹ George Mason University

² US Naval Research Laboratory

³ CPI

⁴ SSRC

Distribution Statement A. Approved for public release:
distribution is unlimited.

Coronal Mass Ejections & Space Weather

- Outburst of solar plasma and magnetic field from the corona.
- CME interactions with the Earth's magnetosphere induce **global-scale perturbations in the near-Earth space environment**, which impacts:
 - Electric Power Transmission
 - Navigation Systems
 - HF Radio Communications
 - Satellite Drag

Lyot Coronagraph Compared to NRL CCOR

STEREO SECCHI COR2

1.40 m

CCOR-2 (SWFO-L1)

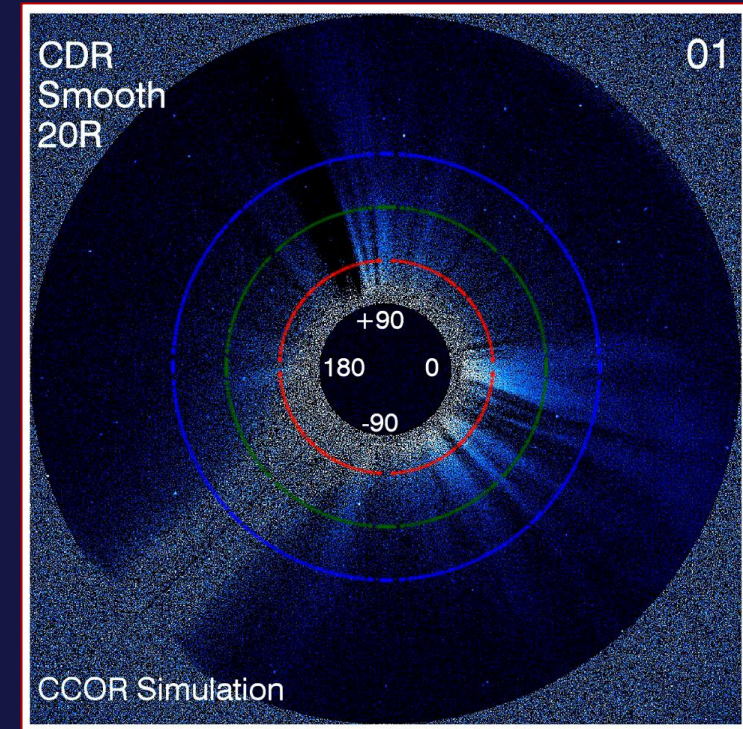

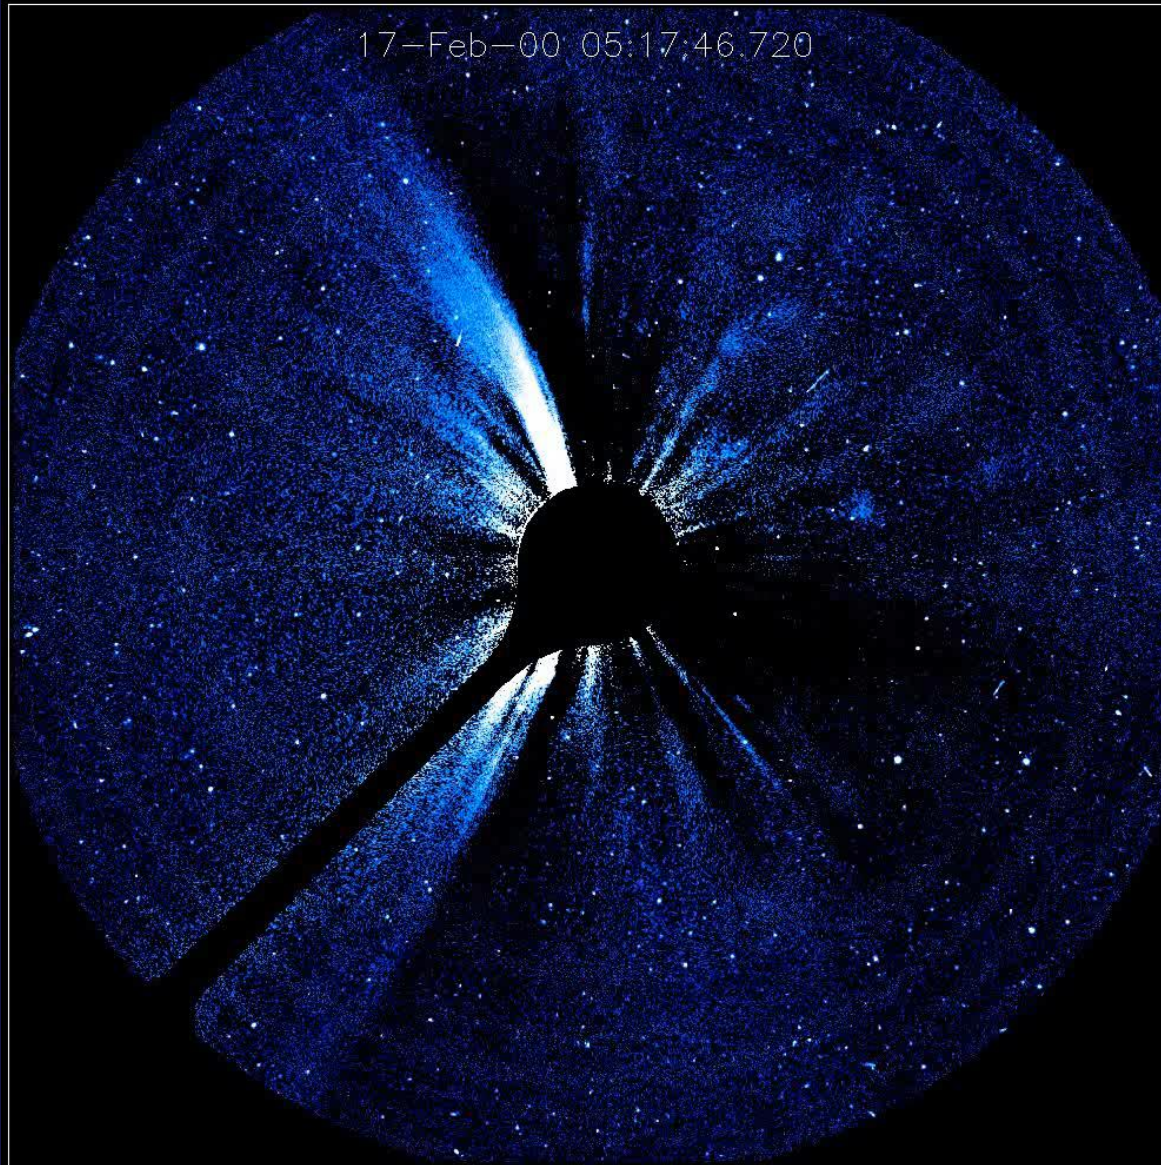

0.72 m

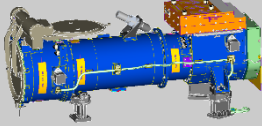

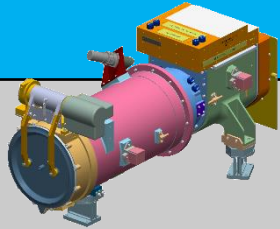

CCOR achieves the same level of diffracted stray light rejection as SECCHI COR2.

CCOR-1 Proxy Movie, Based on LASCO-C3

CCOR Performance Requirements

Specifications	Requirements		
	CCOR-1 	CCOR-2 CCOR-3 	LASCO C3 (actual spec)
Spacecraft	GOES-U	SWFO-L1	SOHO
Bandpass	450 – 750 nm		400 – 1050 nm
FOV	3.7 to 17.0 R_{Sun}	3.0 to 22.0 R_{Sun}	3.7 to 30.0 R_{Sun}
Spatial resolution	50 arcsec	70 arcsec	56 arcsec
Image size	2048 × 1920 pixels		1024 x 1024 pixels
Cadence	15 minutes		Hours ~ 6 minutes
CME Velocity	200 – 3400 km s^{-1} , 5% accuracy		~50 to > 3000 km s^{-1} (1996 – Nov. 2021)
Photometric accuracy	< 10 %		~ 7 % (1996 - 2006)
Minimum corona intensity	$\geq 1.0 \times 10^{-11} B_{\text{Sun}}$		$1.0 \times 10^{-11} B_{\text{Sun}}$

NRL Compact Coronagraph (CCOR)

GOES-U (NOAA)
CCOR-1

2024

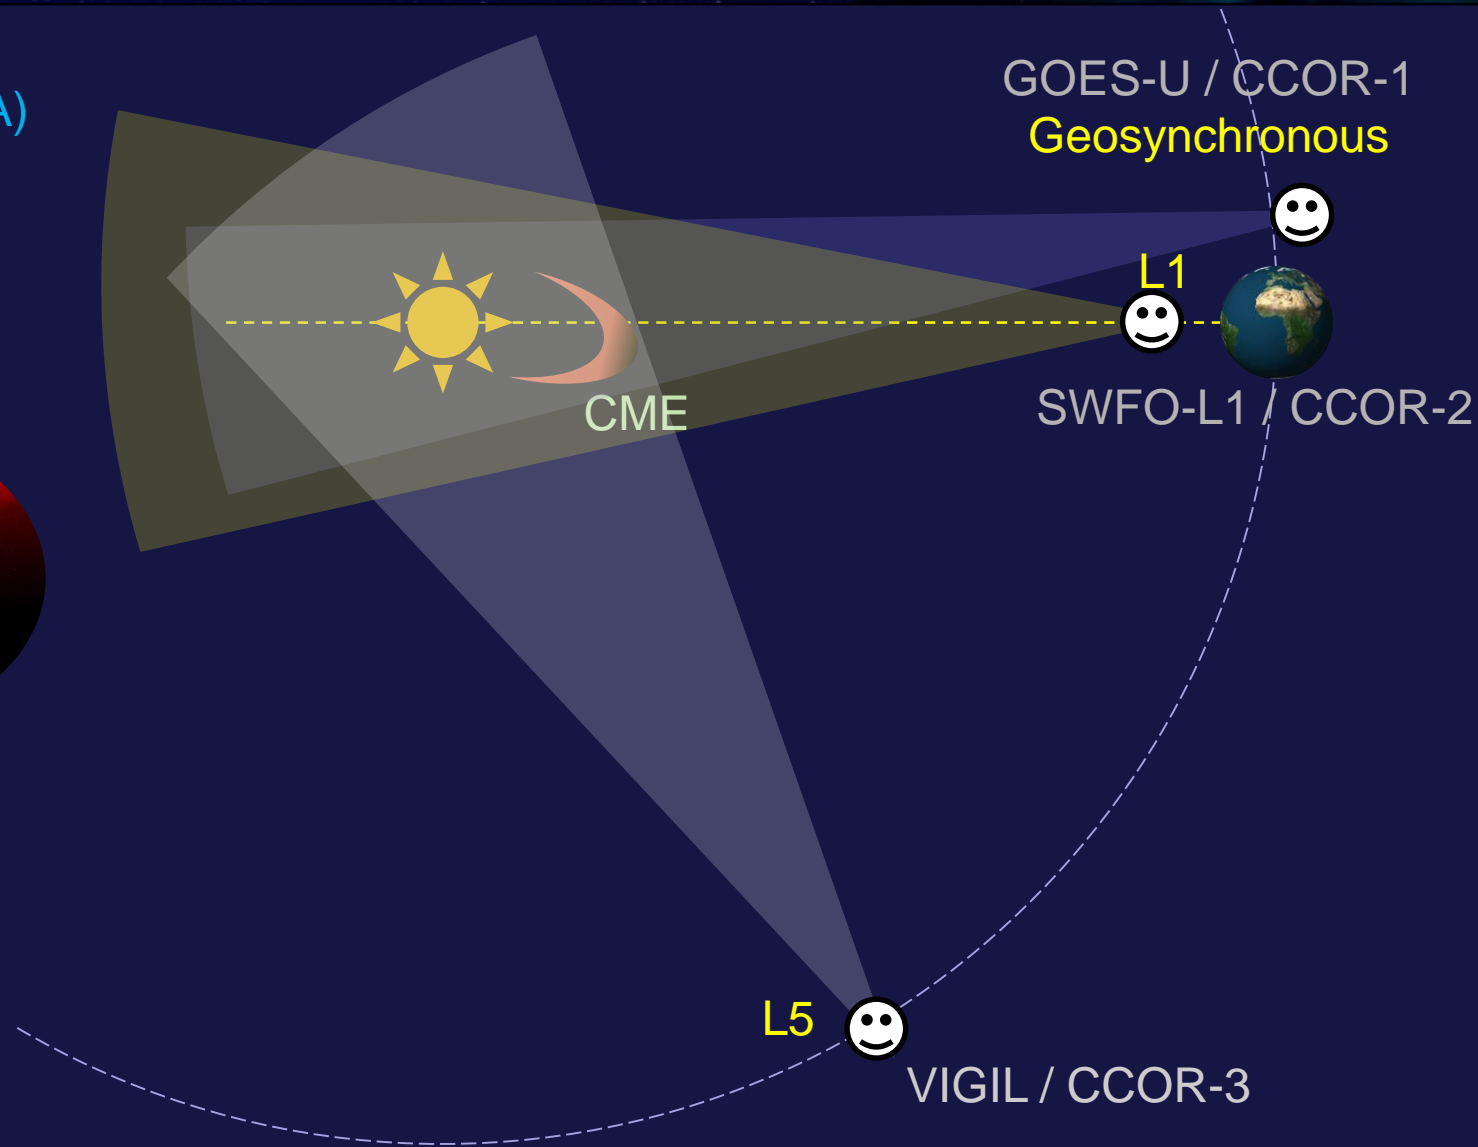

SWFO-L1 (NOAA)
CCOR-2

2025

Vigil (ESA)
CCOR-3

2029

CCOR Images for Forecasting

Wang-Sheeley-Arge Enlil (WSA-Enlil) solar wind / heliosphere model,
NOAA Space Weather Prediction Center (SWPC)

■ CCOR Data Products:

- CME width
- CME mass
- CME velocity
- CME direction

- Issue geomagnetic storm watches, warnings.
- Issued to 50,000+ users.
- Critical storm warnings are communicated directly to power grid operators and FEMA.

Risk & Resiliency to Space Weather Disruption/ Continuity for Operational Solar Coronagraphs

- CME imagery from coronagraphs have improved successful geomagnetic storm forecasts from 27% to 60%.
- Reduction in uncertainty in CME arrival times from ± 12 hours to ± 7.5 hours.
- Having images from multiple viewpoints is crucial in reducing CME arrival time error:
 - 3-viewpoints vs. less = 9.6 ± 0.8 hours vs. 11.6 ± 1.4 hours
 - “We find ‘single viewpoint’ cone analysis, while a useful start, to be highly problematic in many real-world situations.” (Millward 2013)

- Having multiple space-based coronagraphs is essential in today’s space weather forecasting
- Operational solar coronagraphs give the earliest possible notice of impending geomagnetic activity, thus providing the longest possible lead time for geomagnetic storm watches

We're hiring!! 😊

- Level: PhD in physics, optics, image and data processing.
- Experience in data analysis of solar physics data preferable, but not required. Some experience in image processing, and/or astronomy data processing.
- The candidate should be US citizen, or resident (Green Card).

Please contact Arnaud Thernisien, arnaud.thernisien@nrl.navy.mil.

CCOR-1 integrated on GOES-U (Jan 2022)

CCOR-2 at NRL (Mar 2023)

Thank you for your attention!
