WCOSS	WCOSS	WCOSS ?	<b>where</b>

# Coupled modeling with FV3

- FV3 model is being coupled with other earth system components using the NEMS / NUOPC Framework
- Current coupled modeling efforts with FV3
  - A coupled FV3-MOM6-CICE5 modeling system targeting sub seasonal to seasonal time scales with OAR partners (initial testing in progress)
  - A coupled FV3-WW3 modeling system for weather time scales
- NUOPC caps developed in partnership with NESII Group for coupling GSM, FV3, MOM6, HyCOM, WW3 and CICE5
- Exchanging fields between the other earth system components and atmospheric physics via a physics driver are in their final stages of development

# Wave (WW3) - Atmosphere (FV3) coupling

## Example

# FV3-GFS near-term plans

- **Q2 FY2018:** Begin releasing real-time parallel FV3-GFS forecasts to the field
- **Q3 FY2018:** Begin releasing retrospective runs for Community evaluation
- **Q3 FY2018:** FV3-GFS Experimental begins running Operationally
- **Q2 FY 2019:** FV3-GFS Operational

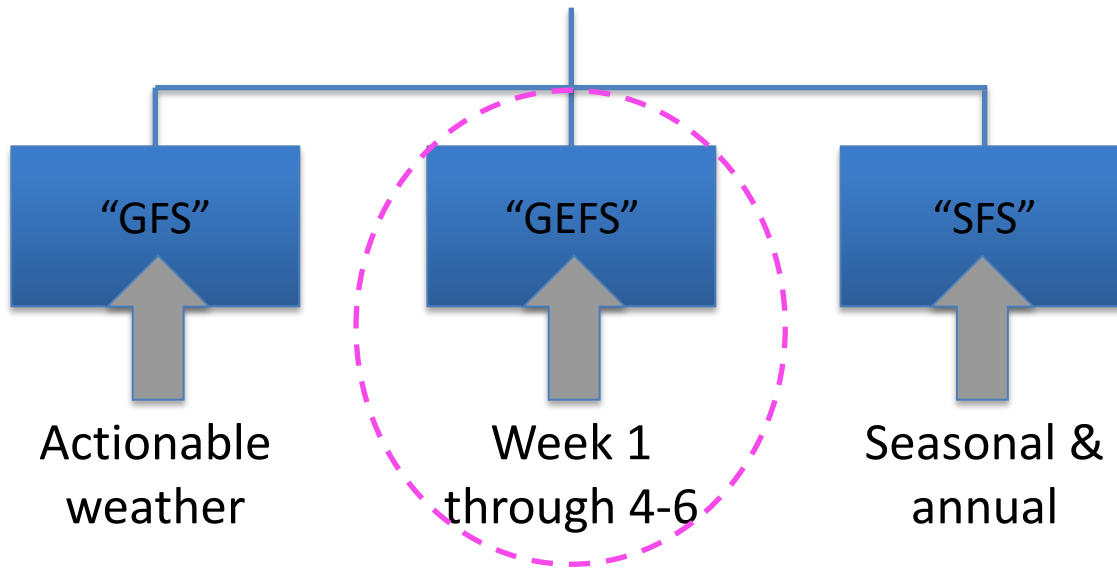

# FV3-GEFS near-term plans

- **Q3 FY2018:** Begin FV3-Hybrid reanalysis for 20 years (1999-2018)
- **Q4 FY2018:** Begin FV3GEFS reforecast (30 years; 1989-2008) extend to 35 days
  - Challenge for inconsistent initial analyses
  - NWC (request) is aware this challenge
- **Q2 FY2019:** Begin to evaluate FV3GEFS forecast performance out to 35 days.
- **Q3 FY2019:** FV3GEFS begin running real-time
- **Q4 FY2019:** FV3GEFS Operational

# Unified Global Model

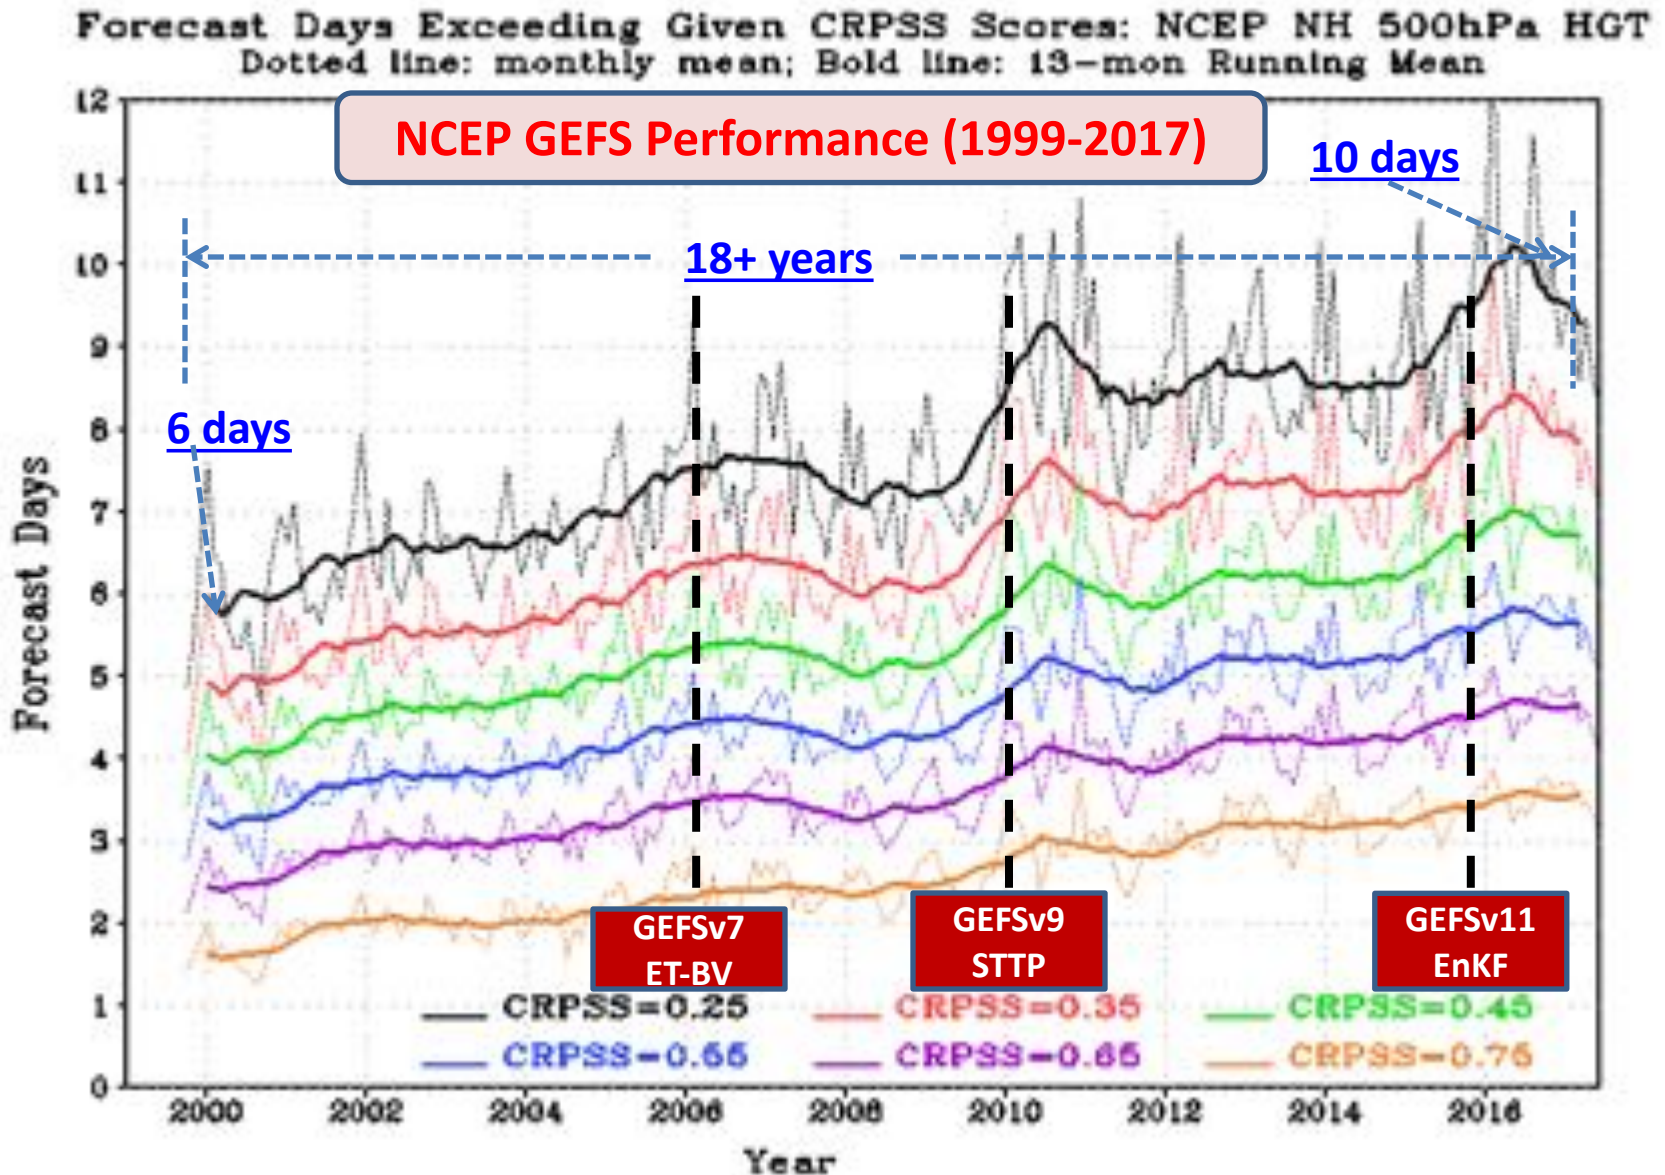

**NGGPS**

# CRPSS for NH 500hPa geopotential height

# “SubX” 35d forecast Set Up

The period of experiments are from **May 1st 2014 to May 26 2016**, and forecasts are initiated for every 7 days at 00UTC. The main difference of four experiments can be found in table

<b>Experiments</b>	<b>Stochastic Schemes</b>	<b>Boundary (SST)</b>	<b>Convection</b>
CTL	STTP	Default	Default
SPs	SKEB+SPPT+SHUM	Default	Default
SPs+SST_bc	SKEB+SPPT+SHUM	2-Tiered SST	Default
<b>SPs+SST_bc+SA_ CV</b>	<b>SKEB+SPPT+SHUM</b>	<b>2-Tiered SST</b>	<b>Scale Aware Convection</b>

***Table:** Configuration differences for four experiments*

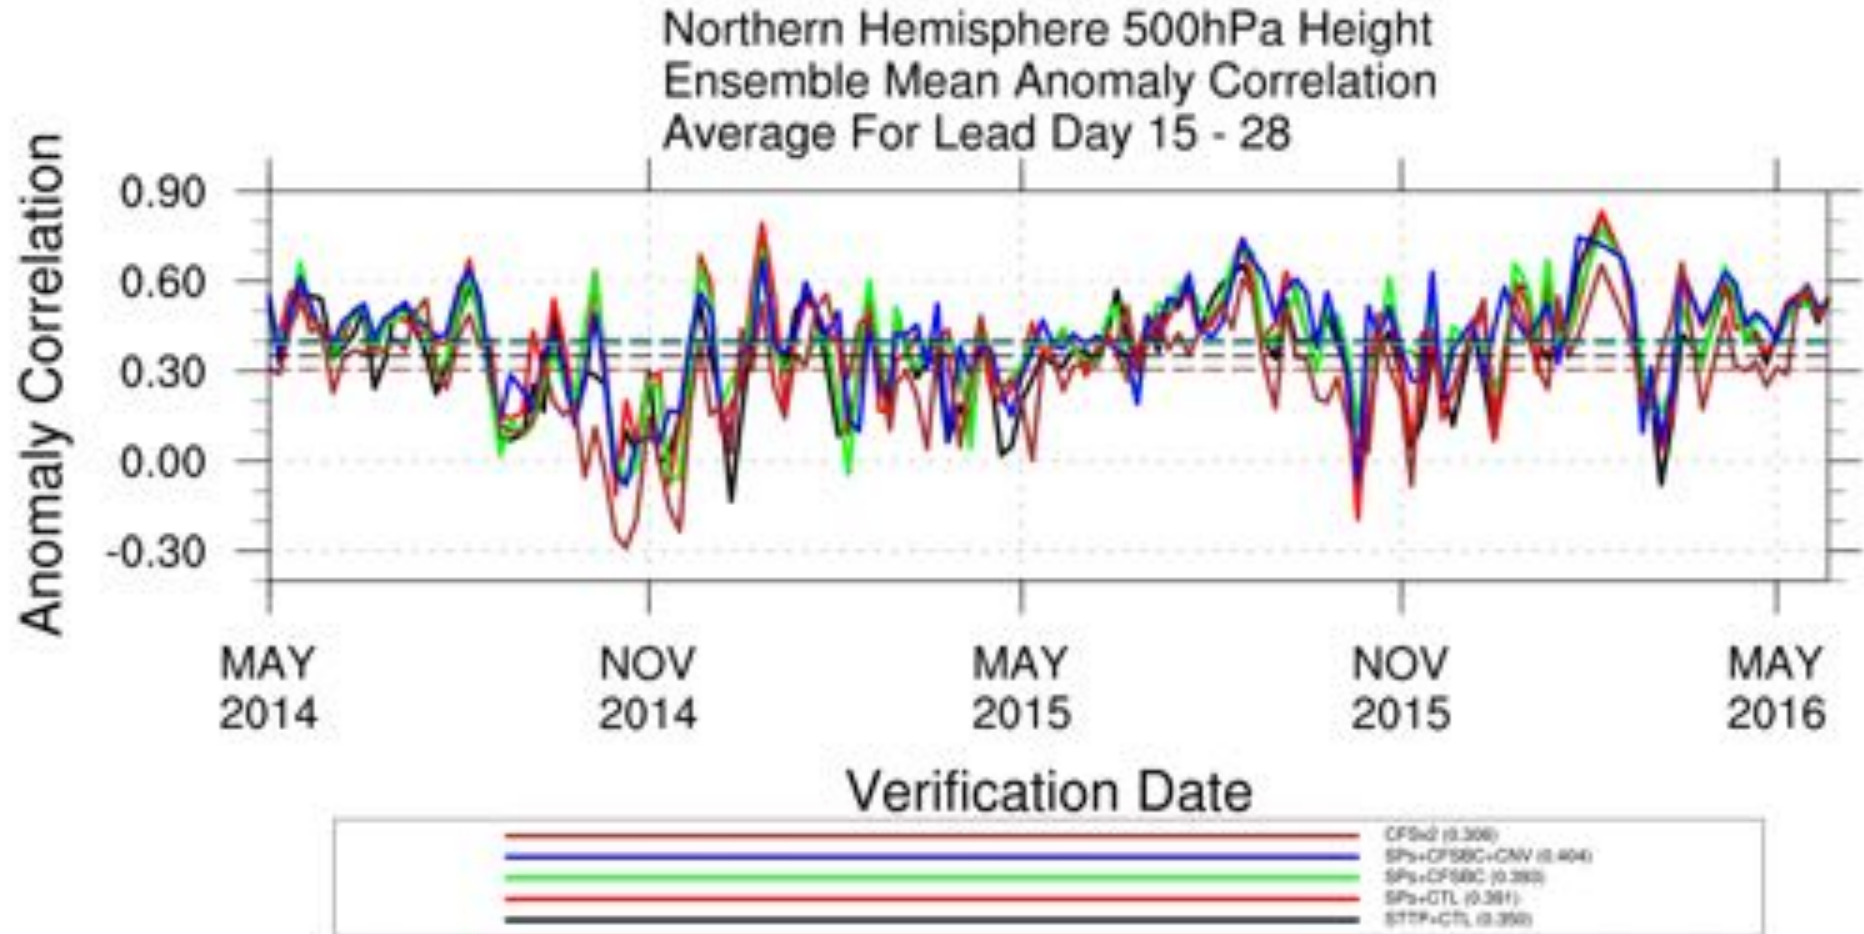

# GEFS week 3&4 forecasts (May 2014-May 2016)

MJO skill: RMM1+RMM2  
20140501-20160526

*CFSv2 is NCEP operational climate forecast system (coupling) implemented on 2011 – 16 members leg (24 hours) ensemble*

# GEFS week 3&4 forecasts (May 2014-May 2016)

**SPs+SST\_bc+SA-CV (0.404)**

**CFSv2 (0.306)**

## **Weeks 3&4 forecast discussion:**

Ensemble size  
T2m calibration

# WH-MJO Forecast Skills: Ensemble mean vs each member

MJO skill (SPs CTL): RMM1+RMM2  
20140501-20160526

Ensemble size for MJO skills

# Comparison of Ensemble Size

PAC Scores	Domains	Variables	21 Members	11 Members	5 Members	1 Member
Day 8-14	NH	z500	0.628	0.619	<b>0.586</b>	<b>0.463</b>
	SH	z500	0.620	0.609	0.582	<b>0.458</b>
	TR	u850	0.686	0.673	<b>0.646</b>	<b>0.501</b>
		u250	0.641	0.630	<b>0.605</b>	<b>0.490</b>
Day 15-28	NH	z500	0.410	0.405	<b>0.372</b>	<b>0.257</b>
	SH	z500	0.380	0.363	0.323	<b>0.194</b>
	TR	u850	0.583	0.571	<b>0.544</b>	<b>0.400</b>
		u250	0.430	0.420	0.409	<b>0.300</b>

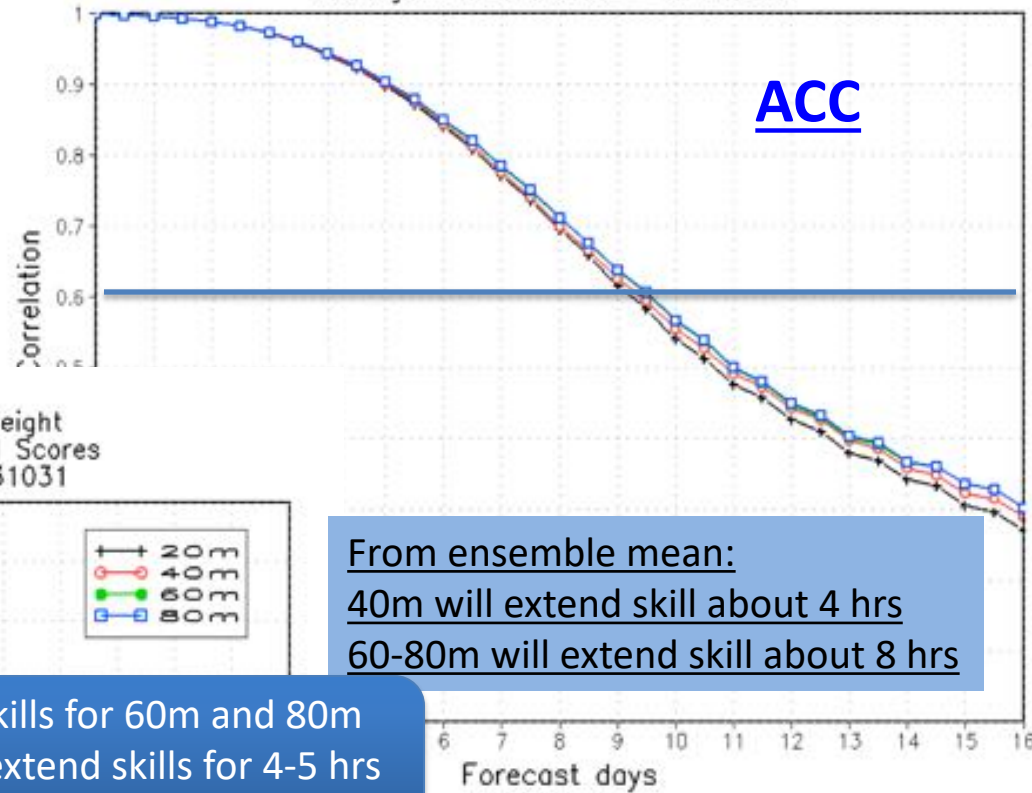

Anomaly Correlation for different ensemble sizes from SPs+SST\_bc+SA\_CV averaged over 25 months for lead days 8-14 (week 2) and lead days 15-28 (weeks 3 & 4). The bolded values represent results that are significantly degraded from the 21-member ensemble experiment at the 95% confidence level.

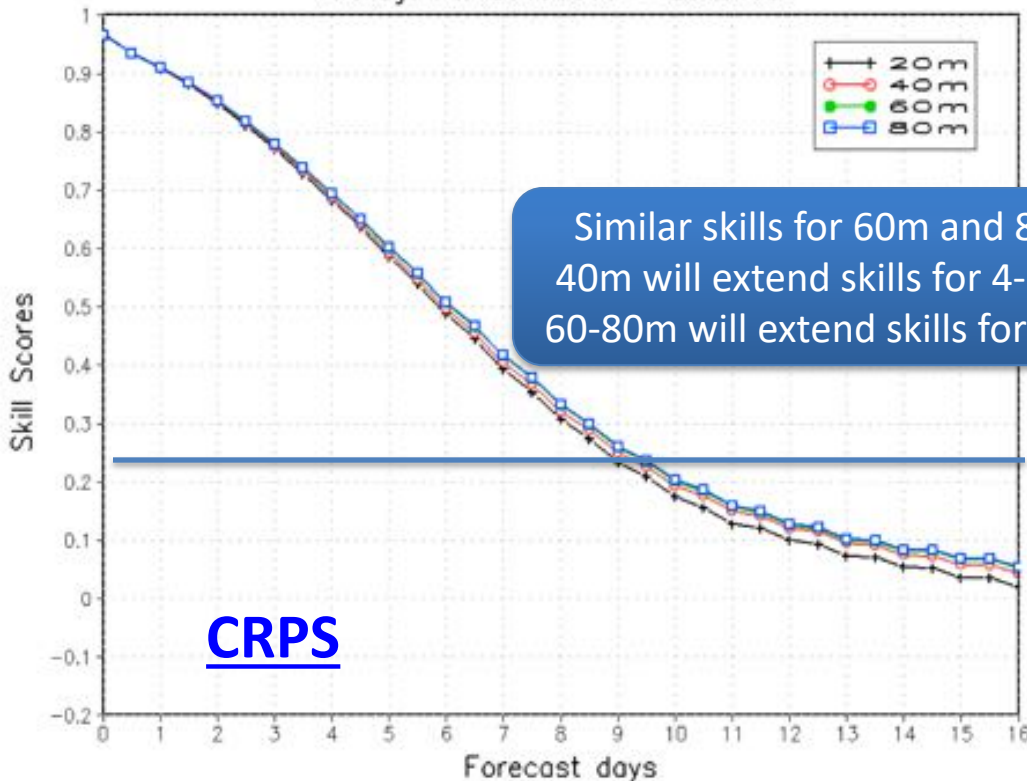

# NH 500hPa height

GEFS ensemble membership size testing from GEFsv11 configuration for 3-months. Random selected 20-, 40- and 60-members from 80-members pool

Northern Hemisphere 500hPa Height  
Ensemble Mean Anomaly Correlation  
Average For 20130801 – 20131031

Northern Hemisphere 500hPa Height  
Continuous Ranked Probability Skill Scores  
Average For 20130801 – 20131031

Similar skills for 60m and 80m  
40m will extend skills for 4-5 hrs  
60-80m will extend skills for 8 hrs

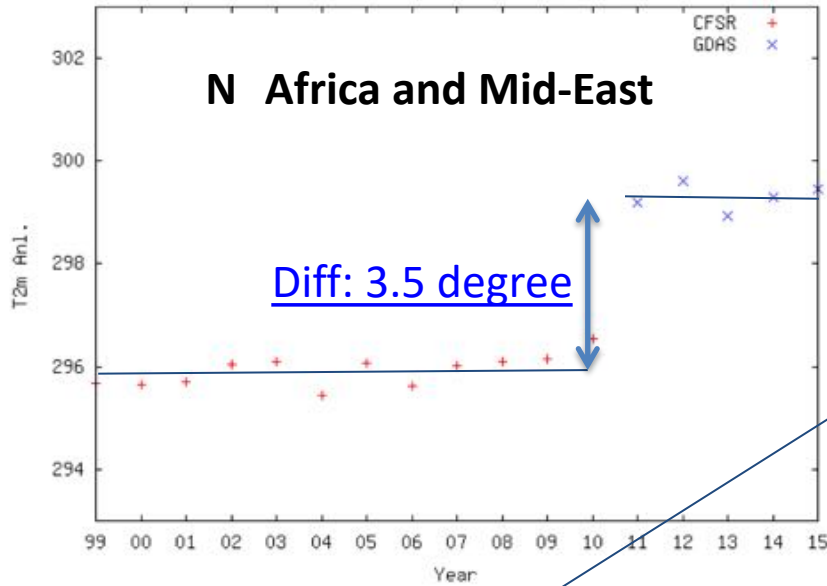

From ensemble mean:  
40m will extend skill about 4 hrs  
60-80m will extend skill about 8 hrs

Summary:  
Based on weather forecast skill analysis (ensemble mean and ensemble distribution) – 60 members could be optimum approach for weather configuration

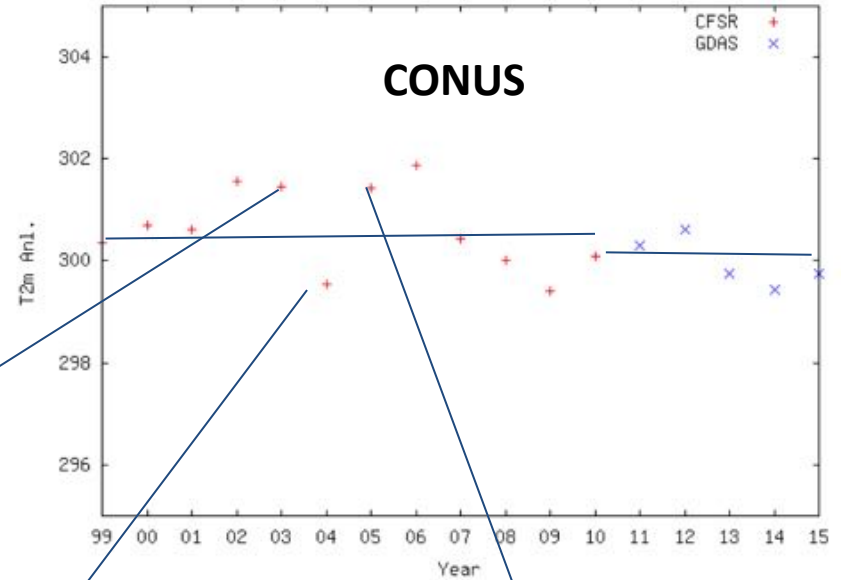

# Inconsistent Analysis

Domain average T2m analysis for July of past 17 years

T2m Anl., NAfrica, Middle East, Land only, July, 1999-2015

T2m Anl., CONUS, Land only, July, 1999-15

July 2003 Regional Ranks

National Climatic Data Center/NESDIS/NOAA

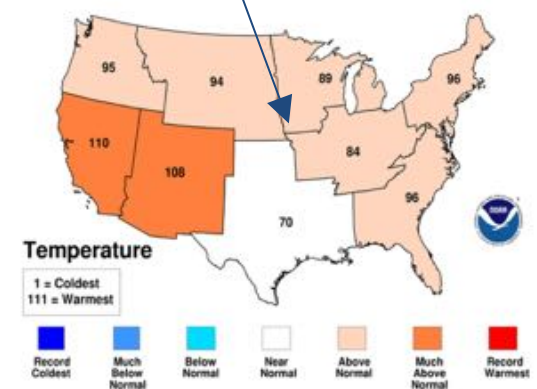

July 2004 Regional Ranks

National Climatic Data Center/NESDIS/NOAA

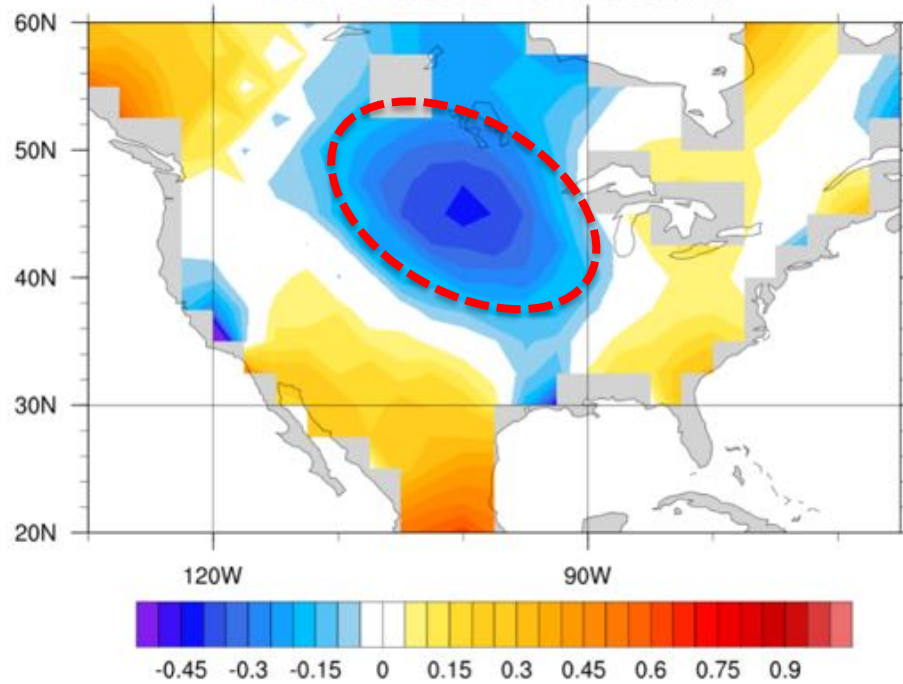

July 2005 Regional Ranks

National Climatic Data Center/NESDIS/NOAA

# Bias correction improves Wks 3&4 forecast skill (2016)

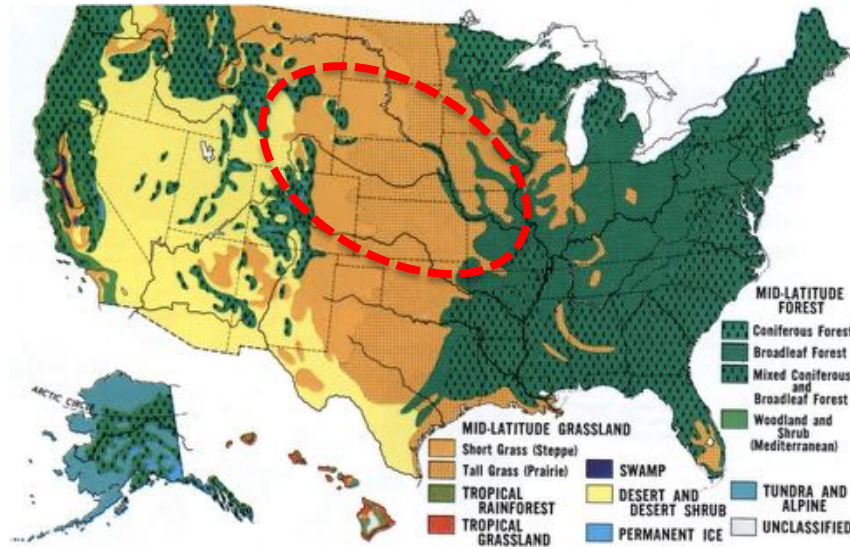

T2m RPSS for raw forecast

T2m RPSS for BC forecast with anal. adjustment

Using adjusted bias (1999-2015) to correct 2016 forecast

Weeks 3&4 surface temperature skills have been improved significantly for CONUS (north/south) plain areas

**Background !!!**

## Implementation Plan for FV3-GEFS (FY2017-2020)

FV3GEFS	FY17				FY18				FY19				FY20			
	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4
FV3GEFS Reanalysis Development			Develop and test low resolution FV3GEFS with FV3GDAS, configure it for reanalysis (ESRL)													
FV3GEFS Ensemble Configuration		Configure FV3GEFS ensemble resolution, members, physics, coupling to ocean and sea-ice, and extend forecasts to weeks 3&4 (EMC)														
FV3GEFS Reanalysis Production						Produce ~20-year reanalysis datasets using FV3GEFS/GDAS (ESRL)										
FV3GEFS Reforecasts							Finalize FV3GEFS V12 configuration* & produce ~20-year reforecasts (extended to 35 days)									
FV3GEFS V12 Evaluation									Evaluate FV3GEFS V12 forecast performance out to weeks 3&4							
FV3GEFS V12 Implementation										Transition FV3GEFS V12 into operations						
Advancement of FV3GEFS													Further advancements of FV3GEFS (GFS/GEFS unification, ensemble based coupled modeling for 35-day weather outlook guidance)			

\* Proposed changes for GEFS V12: 1) Produce FV3 based reanalysis in FY18 using the same configuration as Q2FY18 FV3GEFS (ESRL); 2) Reforecasts will be based on FV3GEFS configured with either coupled to Ocean and Sea-Ice models or use 2-Tier SST approach; and 3) FV3GEFS Reforecasts extended to 35 days to include weeks 3&4 guidance.

# FV3-GEFS implementation (plan)

- Version 12 – **Q4 2019**
- Adapt FV3GFS “beta” version
  - 25km resolution (C384)
  - 64 hybrid vertical levels
  - 31 ensemble members
  - 4 cycles per day, out to 16 days
  - 1-2 extend forecast per week, out to 35 days
- Reforecast – **Q3 2019**
  - Based on new reanalysis (1999-2018)
    - **Challenges – Reanalysis will not be the same analysis as GEFSv12 implementation**
  - 20-30 years
    - **Challenges - No consistent initial conditions for 30 years, but NWC requires**
    - Configuration is in discussion
    - CPC requires – 20 years, every 5-7 days
    - OWP requires – 30 years, every day
    - Membership – 11 members?
    - Variables to be saved – 3 tiers
      - Common variables for calibration (priority) – **could exchange between agencies**
      - Extend variables for downstream application (save on tape)
      - Initial conditions saved on tape for re-run
